## Turkish Automotive Industry

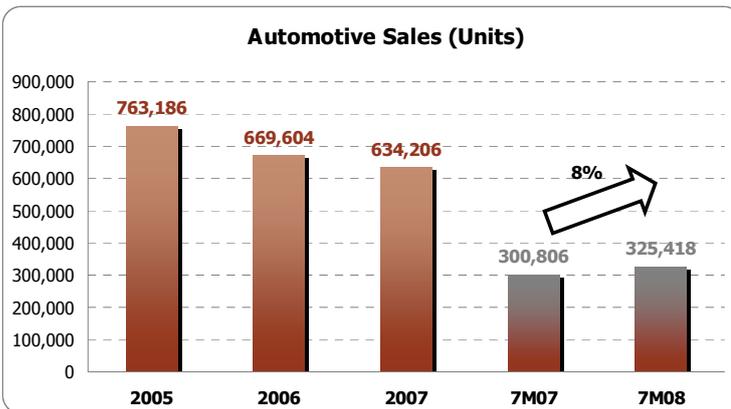

July 2008

Sep 8, 2008

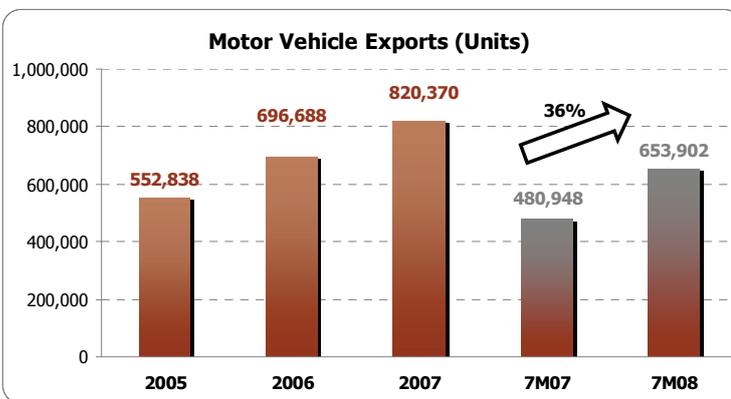

### Production

**Total automotive sector (excluding the tractors) completed the first seven months of 2008 with 828,317 units of production which highlights 31% y-o-y upswing compared to the same period of the previous year.** The corresponding period's data came up with a concomitant capacity utilisation ratio (CUR) of 97%, a ten percentage point amelioration compared to 7M07's CUR. Oyak-Renault is again the leader both in passenger car segment and in overall production as of 7M08 with 210,178 units.

### Domestic Retail Sales

**Even though retail sales kept progressing in periodic base (y-o-y), the volatility and the limbo reverberated in monthly figures.** Automotive Sales tot up by 8% y-o-y in 7M08 to 325,418 units from 300,806 in the same period of 2007 as OSD figures demonstrates. Domestic retail sales bid down by 11% in July compared to the same month of the previous year and realized as 44,701 units.

### Domestic Factory Sales

**In the seven months of 2008, total domestic wholesales escalated by 11% and came out as 153,771 units.** Looking at July only data, domestic factory sales tumbled by 12% compared to the same month of the previous year and 14% compared to June 2008.

### Exports

**According to Turkish Export Association (TIM), motor vehicles, parts and accessories sector was the leader with \$17.1bn amounted annual exports with the share of 21.58%. Total exports eventuated as 653,902 units in the first seven months of 2008, representing a 36% y-o-y hike.** Oyak-Renault maintained its leader position in total exports with 174,624 units.

	2005	2006	2007	7M07	7M08	%	Jul-07	Jul-08	%
<b>Production</b>	879,452	987,580	1,099,414	629,962	828,317	31%	92,007	115,191	25%
<b>Retail Sales</b>	763,186	669,604	634,206	300,806	325,418	8%	50,117	44,701	-11%
<b>Domestic Factory Sales</b>	332,238	288,145	276,408	138,864	153,771	11%	22,587	19,901	-12%

<b>CUR</b>	<b>76%</b>	<b>82%</b>	<b>89%</b>	<b>87%</b>	<b>97%</b>		<b>89%</b>	<b>94%</b>	

## Production

**Total automotive sector (excluding the tractors) completed the first seven months of 2008 with 828,317 units of production** according to Automotiv Manufacturer's Association, which highlights 31% y-o-y upswing compared to the same period of the previous year. The corresponding period's data came up with a concomitant capacity utilisation ratio (CUR) of 97%, a ten percentage point amelioration compared to 7M07's CUR. Improvement (y-o-y) experienced in all segments, where the major contribution again originated from the commercial vehicle segments, as in the preceding months of this year. Growth rate in the commercial vehicle manufacturing more than doubled the passenger cars', where the rates were 47% and 21%, respectively. The driving forces within the commercial vehicles were midibus and pick-up subsegments with 98% and 52% growth, in turn.

**Monthly figure (y-o-m) exhibited nearly the same performance with the seven months period, where the total vehicle production materialized as 115,191 units in July 2008, by surging 25%.** Passenger cars production performance was the same as 7M08 period and grew by 21%; whereas the commercial vehicle production growth rate was below the 7M08, but again satisfactory, and it soared by 32%. The monthly CUR was 94%, 5 percentage point above the July 2007. Automotive production presented a meagre m-o-m growth of 2%, which could easily be attributed to the most the automotive factories maintenance period in July.

**Oyak-Renault is again the leader both in passenger car segment and in overall production as of 7M08 with 210,178 units.** Ford Otosan, followed him with 202,485 units. Ford has lowered their year-end expectations 2-3 months ago due to the ambiguous environment in Turkey. Since the political uncertainty was vanished, we believe that Ford Otosan will raise their forecast and implement new investments. Tofaş and Toyota kept their stance in four big manufacturers by producing 195,322 and 97,362 units of vehicle.

## Domestic Retail Sales

We emphasized in our June Report that the unfavourable conditions (global and local volatility) has started to be reflected and the downturn would realized in forthcoming months. Even though retail sales kept progressing in periodic base (y-o-y), the volatility and the limbo reverberated in monthly figures.

**Automotive Sales tot up by 8% y-o-y in 7M08 to 325,418 units from 300,806 in the same period of 2007 as OSD figures demonstrates.** Imported vehicle disposal surged more than locally manufactured vehicle sales, which severally posted 10% and 6% y-o-y growth. The quantum of the imported automotive sales in overall stood at 57.1% as of 7M08, which was 56.1% in 7M07.

**As we mentioned above automotive sales presented a contraction in monthly figures.**

Domestic retail sales bid down by 11% in July compared to the same month of the previous year and realized as 44,701 units. Imported car share ascended and it eventuated as 59.5% in the corresponding month which was 54.3% a year ago. Within the m-o-m framework retail sales posted 9% deterioration.

**Ford is the top-notch in the imported passenger car sales** with 15,527 units, where Volkswagen set its position as a captain of the LCV segment by selling 12,930 units.

## Domestic Factory Sales

**Domestic factory sales exhibited the same performance as retail sales. It recorded a growth in seven months period whereas there was a contraction on monthly basis.** In the seven months of 2008, total domestic wholesales escalated by 11% and came out as 153,771 units. Domestic passenger car and commercial vehicle factory sales posted 13% and 9% growth, respectively. Except truck car and minibus, all sub-segments wholesale kept progressing in the seven months of 2008.

**Looking at July only data, domestic factory sales tumbled by 12% compared to the same month of the previous year** and 14% compared to June 2008 with 19,901 units.

**Tofaş, Ford Otosan and Oyak-Renault were the top three companies** with 39,954, 30,820 and 28,787 units of wholesales as of 7M08. Tofaş's leadership performance could easily be attributed to 66% y-o-y growth in pick-up segment, mainly due to Fiorino sales.

## Keep offsetting the negative look of the domestic sales...

According to Turkish Export Association (TIM), motor vehicles, parts and accessories sector was the leader with \$17.1bn amounted exports with the share of 21.58% in Turkey's overall exports as of 7M08. In the seven months of 2008, Ford Otosan, Oyak-Renault and Tofaş were 3 automotive companies in the top five.

Total exports eventuated as 653,902 units in the first seven months of 2008, representing a 36% y-o-y hike. All segments denoted a joyful growth where the triumphant contribution came from pick-up segment.

Evaluating y-o-m figures are compatible with y-o-y figures, which presented 36% growth. 96,369 units of automotive were exported in July 2008, which is 2% higher than the June. Pick-up was again the main contributor to the monthly figure.

Oyak-Renault maintained its leader position in total exports with 174,624 units, who has stripped from Ford Otosan a period ago. Ford Otosan and Tofaş, top 2 and 3 exporters, exported 164,820 and 154,344 units, in turn. (Exhibit 6)

Source: OSD, TSKB Research

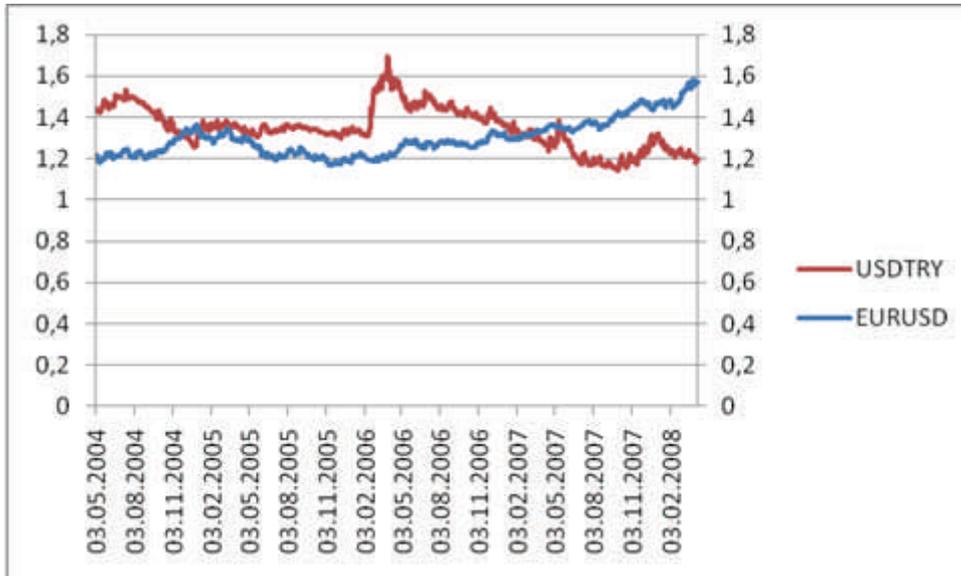

We will talk about the basics of exchange rate, interest rate, equity markets, oil and other commodities, food prices, baking sector and strategy in the next couple of months. This is intended to be a sequel of snapshots in a very much bread-and-butter statistics. First, ordinarily people only look at the nominal USDTRY rate when it comes to mentioning the advent of the exchange rate and its impact on the economy. This is obviously wrong because one ought to consider the WARER (weighted average effective exchange rate), which is a basket of currencies weighted according as we trade them intensively or not. And second, if considering the nominal exchange rate is warranted for some purpose, as we do here, it is imperative to take a look at the euro-dollar basket. For instance, the nominal USDTRY rate is misleading in terms of trade competitiveness because Turkey imports in USD-weighted manner and its exports are mainly in EUR terms. Of course, the WARER itself as a single statistic does not constitute a theoretical argument and there are times when overvaluation of a currency could well be in the eye of the beholder only. As the base year changes, the terrain for comparison shifts accordingly.

Now take the nominal USDTRY rate. Between May 2004 and July 2008 the margin of fluctuation ranges from 1.417 to 1.15, hitting 1.694 in June 2006. Excluding the May-June 2006 turmoil, which did not last long, the nominal rate wandered between 1.4 and 1.2 approximately. A look at the EURUSD parity we see it begins with 1.1945, hits 1.1668 in November 2005, mildly errs in the vicinity of 1.25 for the better part of 2006 faces the July 2007 mortgage or CDO-originated crisis hit the world at 1.36. It pursued an upward trend since then. In the last (almost) five years, whereas USDTRY was generally confined to the 1.4-1.2 disciplinary box, the EURUSD moved between 1.2 and 1.6. The USDTRY have seen higher levels, but only temporarily, whereas the EURUSD seems to have been anchored in the 1.50s recently in a durable way. When the euro was instituted in January 1999, the first reading ever was 1.18, but in November 2000 even 0.84 was seen. ***In a time span of almost ten years, the EURUSD rolled between 0.84 and 1.60. Almost twice as high or low for that matter.***

Take historical volatility (50 days moving average): the visual evidence suggests the EURUSD was in general less volatile than the USDTRY rate over the last 52 months. Only is it true that after July 2007 the two volatilities converged partially, but never meet each other exactly. ***Although the EURUSD volatility is still considerably lower, the two volatilities move together, at least.*** The USDTRY rate has surpassed 1.700 in March 2003, the beginning of the Second Gulf War, and also in June 2006. However, after Kemal Derviş assumed his post-2001 crisis mission here, the nominal exchange rate vis-a-vis the dollar stood still. From one end to the other, the EURTRY parity also remained still between January 2003 and July 2008.

Furthermore, consider the TRY-denominated T-bills benchmark rate, compound: its historical volatility is much higher than the exchange rate. If the rate of interest is, as purported to be by the CBT, an instrument against FX volatility, then it is highly remarkable that it was much more volatile than the variable it is supposed to be able to control. We think the interest rate was not even weakly exogenous during the entire period and did not provide a sufficient statistic to control the variance of the exchange rate. ***An endogenous interest rate could not possibly have been that effective as a policy and control tool.***
